Descriptions

SS121E24 series piezoresistive pressure transducers are developed for pressure applications that involve measurement of hostile media in harsh environments compatible with 316L stainless steel. They are calibrated and temperature compensated, available for use with either a constant voltage or current source. They feature a variety of pressure connections to allow use in a wide range of OEM equipment.

SS121E24 series are rugged and reliable transducers, all stainless steel structure structure, no O-ring used for sealing, cover the pressure range from -100KPa to 40MPa, recommend for use in a wide variety of pressure sensing applications where corrosive liquids or gases are monitored.
